EDUCATION

University of California, Berkeley — Spring 2029

Bachelor of Arts in Data Science and Economics

Coursework: Machine Learning, Computer Architecture, Data Structures, Linear Algebra, Operating Systems and Systems Programming, Intro to Internet, Intro to Economics, Concepts of Statistics, Principles of Data Science, Discrete Math & Probability Theory

EXPERIENCE

Rivian, *Machine Learning Intern* — Summer 2026, Palo Alto

• Researched **tokenization, paged KV-caching**, and **FP16 matmuls** slashed **TTFT ~54%** (**118 ms to <54 ms**), cut VRAM fragmentation by **~42% (~5.8 GB)**, and boosted **throughput** from **26 to 68 tokens/s across >850k runs**

• Engineered and integrated the entire **LLM pipeline** into a custom **C++/Python runtime** tailored to internal **3B–8B parameter models**, slashing **inference latency** from **~75 ms** to **<38 ms/token** while delivering a **>2.4×** throughput increase

Scorely.GG, *Co-Founder* — 2026

• Built a crypto sportsbook supporting **>45 live markets, esports, and complex cross-market parlays**, processing **>$5k** per day in **betting volume** across **>1k on-chain transactions** per week

• Engineered **conversational AI agents** backed by a **custom RPC reasoning server**, enabling users to execute **automated bets** using **natural language** with **<120 ms median response latency** across **>14,000 daily queries**

• Integrated **Hyperliquid** for **>800ms deposits** and **withdrawals** across **>8,500 active sessions**, sustaining **>45 concurrent TPS**

• Secured a **Polymarket affiliate** badge and recognition from the **Solana ecosystem** (followed by **@solana** and **@x402**).

Memorial University, *Software Engineer Intern* — Summer 2025

• Architected **custom CNN architectures** with **+18–22% accuracy gains** over baselines across **>10,000 medical images**

• Built **YOLOv8-based segmentation pipelines** processing **~1.2M bounding boxes**, enabling **pixel-level inference** at **<45 ms/image**

• Implemented **data pipelines (Pandas, NumPy, OpenCV)** handling **~500K samples**, cutting preprocessing latency by **~40%**

• Produced **automated evaluation dashboards** (ROC, PR, confusion matrices) reducing analysis turnaround by **~60%**

UC San Francisco, *Data Science Intern* — Summer 2025, San Francisco

• Deployed **LLM inference servers (llama.cpp)** sustaining **>35 QPS** on **on-prem CPU-only hardware**

• Executed **INT8/INT4 quantization**, shrinking model size by **~65%** and cutting latency by **>52%**

• Orchestrated **containerized inference workloads** with **Docker + Kubernetes**, scaling to **~20 nodes** with **>99.5% uptime**

• Fine-tuned **>6B-parameter LLMs** using **RLHF / RLAIF**, improving task-specific metrics by **~30%**

UC Santa Cruz, *Machine Learning Intern* — Summer 2024, Santa Cruz

• Engineered **GAN pipelines** generating **>40,000 synthetic images**, increasing dataset size by **~4×**

• Trained **CNN classifiers** achieving **~25% error reduction** via **MixUp + augmentation**

• Conducted **>80 training runs** and **hyperparameter sweeps**, improving model robustness by **~18%**

HONORS/AWARDS

- **Provisional Patent** for Retivison: fundus **disease detection** software, **patent #63/523937**
- Winner, Member's Choice Award, National Academy of Inventors Student Showcase
- **2x AIME** Qualifier, **(2.5%** of test-takers) & **USACO Gold**

PROJECTS

Retivision, *Fundal Disease Detection* — March 2024

Affordable fundus disease detection using retinal imaging & MobileNetV2 framework; **94% accuracy** across 7 diseases; Received Member's Choice Award at Nat. Academy of Inventors (voted by **400+ professors**); **2nd** in ICW U.S. Nationals (**2/120K**) & **1st in CA**; Robby Beyers Innovative Award (**7/980**), **2nd** at Synopsys Science Fair **(top 100/980**), BioGENEius semi-finalist & more

LEADERSHIP & ACTIVITIES

SocrAI, *Co-Founder* — Summer 2024

• **Co-founded** an **AI research** summer program which garnered interest from over **60+ qualified applicants**

• Gave away over **$10,000+** in sponsored cash **scholarships** to underprivileged kids via Youth Enquiry Network;

• Culminated in **2 research papers** which were presented to nonprofits and startups in a **research conference**

PUBLICATIONS

• A. Raja and A. Bhethanabotla, "OperateLLM: Integrating Robot Operating System (ROS) Tools in Large Language Models," 2024 IEEE 1st International Conference on Communication Engineering and Emerging Technologies (ICoCET)

• A. Raja, A. Bhethanabotla, W. Yoon, "PCBGen: Efficiently Creating Printed Circuit Board (PCB) Designs with LLMs," 2024, accepted to 2025 ICoCSETI

SKILLS

Programming Languages: Python, C++, Java, SQL, Unix/Shell Scripting

ML/AI Technologies: PyTorch, TensorFlow, NumPy, OpenCV, Pandas, Scikit-learn, CUDA

Developer Tools & Platforms: Git, Kubernetes, Docker, Linux, LaTeX, Jenkins, Ansible

Core Competencies: Deep Learning (CNNs, GANs), Machine Learning, Data Structures & Algorithms, Distributed Systems, Real-Time Inference, Model Quantization, Data Visualization

Interests: On-Chain Prediction Markets, Poker, Skateboards, IM Basketball/Flag, Fantasy Sports, Chess, Streetwear, Sports Analytics
