Education

University of California, Berkeley *Expected May 2029*

B.S. Industrial Engineering and Operations Research (IEOR) / Applied Math *GPA: 3.7/4.0 · SAT: 1530*

- College of Engineering: Dean's List, Honors to Date.
- Relevant Coursework: Probability (Stat 134), Discrete Mathematics, Optimization (IEOR 162), Stochastic Processes (IEOR 173), Engineering Economics (IEOR 120), Linear Algebra & Differential Equations, Data Science (C8, 100, C104), Machine Learning.

American School of Madrid — ***IB Diploma & High School Diploma*** *June 2025*

- IB Diploma; HL: Mathematics: Analysis and Applications, Physics, Chemistry. Business Management IA: 7/7.

Experience

PwC — ***Strategy& Consulting Intern*** *June – July 2026*

- Won the PwC 2026 AI Hackathon: designed and defended a firm-wide proposal for embedding AI into PwC's internal processes, presenting to senior partners and C-suite leadership.
- Delivered market, legal, and financial analysis across 4 client proposals spanning European market entry, private-equity investment feasibility, product innovation, and M&A diversification.

Undergraduate Research Apprenticeship (URAP) — ***Research Assistant*** *Feb 2026 – Present*

- Valued military, financial, and humanitarian aid delivered to Ukraine (2022–2024) across 3 donor countries under Prof. Anastassia Fedyk (Berkeley Haas) and Thomas Rowley (Bocconi), compiling an item-level monthly delivery ledger by aid type.
- Verified deliveries against the Kiel Institute Ukraine Support Tracker, SIPRI, and Oryx, and applied straight-line depreciation to each item on a schedule matched to the US valuation for comparability.

IISE Berkeley Consulting Club — ***Consulting Officer*** *Jan 2026 – Present*

- Audited 6 Power BI dashboards for a Kaiser Permanente Medicare Age-In program, running stakeholder interviews to surface interpretation gaps in KPI definitions, layout hierarchy, and color consistency.
- Delivered redesigned Tableau mockups and a proposed unified schema layer consolidating 100+ raw tables into 8 governed entities to enforce consistent KPI definitions across dashboards.

Veganuño, S.L. — ***Operations & Process Improvement Intern*** *May – June 2024*

- Reduced incident resolution time 20% by streamlining intake, tracking workflows, and coordinating with insurers.
- Designed an Excel-based system to centralize maintenance issues, invoice status, and follow-ups, improving operational visibility.

Projects

Drawdown Risk Analysis via Monte Carlo Simulation — ***Quantitative Research Project*** *Oct – Dec 2025*

- Built an event-based drawdown framework in Python decomposing ETF price paths into peak–trough–recovery episodes, computing max-drawdown depth, time-to-recovery, and tail-risk metrics.
- Ran 10,000-path Monte Carlo simulations across 5 ETFs to estimate 5-year max-drawdown distributions, quantifying tail risk through worst-case and percentile drawdown depths.

Development of Chess Game in Python with AI Engine — ***Intro to Computer Science*** *Jan – June 2025*

- Built a Python chess engine with an AI opponent in Pygame, with full rules enforcement and gameplay for 30+ users.
- Implemented bitboard-based move generation and a GUI to manage state transitions, move validation, and user interaction.

Academic Programs & Competitions

Power IA Program (thePower v.5) — ***Grade: Outstanding*** *June – July 2026*

- Completed a 55-hour applied AI program spanning AI fundamentals, prompt engineering, generative AI tools (ChatGPT, Copilot, Gemini), AI agents, and AI regulation, ethics, and data governance.

Wharton Global High School Investment Competition — ***Semifinalist*** *Jan – June 2024*

- Managed a simulated portfolio to a 100x notional increase through thesis-driven investments in sustainable companies.

Program for the Enrichment of Gifted Students (PEAC) — ***Researcher*** *2019 – 2025*

- Selected for a regional gifted program in physics, biology, and space science, including the ISS Astro Pi challenge.

Technical Skills and Awards

- **Languages:** Native Spanish and English; Fluent in French (DELF B2).
- **Programming Languages:** Python, SQL, MATLAB, C++ (in progress), HTML.
- **Libraries & Methods:** Monte Carlo simulation, probabilistic and Bayesian modeling, stochastic processes, statistical and financial risk modeling, portfolio and data analysis, prompt engineering, LLM and AI-agent workflows.
- **Software & Tools:** Excel, Tableau, Power BI, Jupyter Notebook, Git, GitHub, Visual Studio, Microsoft Office, Google Workspace, ChatGPT / Copilot / Gemini; data visualization, version control.
- **Awards & Programs:** National Honor Society + Director's Award; Winner/Published books in Manos Unidas, La Brújula, Cervantes Alcalá de Henares; Kumon Program in Literature & Math; Johns Hopkins (Honors Physics & Forensic Science).
