Hussain Mohammed

Full Stack Developer | Mobile Developer - Flutter

Highly motivated Flutter Mobile Developer with emphasis on creating functional solutions to real-world problems. Possesses extensive knowledge in software development, problem solving, and designing systems. Quick learner, adaptable and able to acquire new skills swiftly. Capable of working effectively individually or within a team setting.

Technical Skills

Programming Languages & Frameworks
Flutter, Dart, ReactJS, NextJS, TypeScript, Node.js, JavaScript, HTML, CSS, TailwindCSS, Swift, Rust, PHP Laravel, SQL, GraphQL, GoLang, .Net.

Testing & API Automation
Postman, API Documentation.

Soft Skills
Requirement Analysis and Documentation, Cross-functional Team Collaboration, Fast Learner, Organizational Mindset, Analytical Thinking, Problem Solving.

Education

- Bachelor of Science in Programming
  Bahrain Polytechnic | January 2027
- Full Stack Developer Diploma | Mobile Development Specialization - Flutter
  Reboot Coding Institute | 2024 Oct - 2026 April.

Projects

Secure Messenger (Android Chat Application)

A Flutter-based chat application that enables real-time messaging with end-to-end encryption, ensuring secure communication between users.

Role: Flutter Mobile Developer
Technologies: Flutter, Dart, Supabase

- Optimized message delivery and handling for performance and reliability
- Built a real-time chat system using Supabase for backend and database
- Designed and developed responsive UI for smooth user experience
- Implemented end-to-end encryption to secure user messages
- Integrated user authentication and session management

Chess Multiplayer App (Android Game Application)
A full stack mobile chess application that enables real-time multiplayer matches, allowing users to play, invite others, and join games with full rule enforcement.

Role: Flutter & Backend Developer
Technologies: Flutter, Dart, Golang

- Built backend services in Golang to manage game state, player sessions, and matchmaking
- Ensured synchronization between players for a consistent and fair gameplay experience
- Developed a real-time multiplayer system using WebSockets for live gameplay
- Integrated QR code system for quick game invites and joining matches
- Used simple_chess_board to render and manage the chessboard UI
- Implemented notifications to alert players when it is their turn

Hussain Mohammed

Full Stack Developer | Mobile Developer - Flutter

2048 Game (Android Game Application)
A mobile implementation of the classic 2048 puzzle game where players combine tiles to reach the 2048 tile, featuring smooth animations and real-time score tracking.

Role: Flutter Mobile Developer
Technologies: Flutter, Dart

- Developed core game logic including tile movement, merging, and score calculation
- Designed a responsive 4x4 grid system with dynamic tile generation
- Implemented swipe controls for smooth interaction in all directions
- Designed clean and user-friendly UI for gameplay experience
- Implemented game-over detection and restart functionality
- Added animations for tile movement and merging effects
- Built real-time score tracking with best score persistence

KaQuiz (Friend Tracker Mobile Application)
A real-time friend location tracking app that allows users to share GPS locations, manage friendships, and interact through a live map interface.

Role: Flutter & Backend Developer
Technologies: Flutter, Dart, Golang, PostgreSQL, Google OAuth, JWT

- Built backend services in Golang for authentication, friend system, and real-time location updates
- Integrated PostgreSQL for user, friendship, and location data management
- Designed responsive UI with custom themes and animated navigation
- Ensured secure API communication and data handling across the app
- Implemented Google Sign-In with JWT-based session management
- Designed a real-time map interface with live friend location tracking
- Developed friend system (search, invite, accept/decline, remove)

Languages

• Arabic – Native.
• English – Fluent.
