EDUCATION

University of California, Berkeley **Expected: May 2028**

B.S., Industrial Engineering & Operations Research *Berkeley, CA*

- **Relevant Coursework:** Engineering Economics, Stochastic Processes, Optimization, Linear Programming, Supply Chain Management, Simulation for Enterprise-scale systems

WORK EXPERIENCE

Komline-Barnes **June 2026 – Present**

Operations & Data Analytics Intern *Rockford, IL*

- Built and scaled a company-wide reporting pipeline (Python, SQL, Microsoft Fabric) pulling live data from the company's D365 ERP, now used daily across operations, purchasing, and planning, delivering 7 report types company-wide
- Delivered an estimated $112K in annual savings by building a Shortage Dashboard, giving inventory and PMs real-time visibility into material shortages across every open production order and cutting manual lookup time from ~3.5 min to under 1 min for ~10 staff
- Built the Floor Operations report, replacing manual D365 lookups with a single daily view of job status, station progress, and hours worked vs. scheduled for 15 users across the shop floor, production control, and PMs, cutting a ~1.5 hour manual sort down to under a minute
- Refactored a 4,700-line production script into 11 focused modules to reduce risk and improve maintainability in a live daily reporting tool; verified byte-identical output across all 69 generated files before deployment
- Extended the full reporting pipeline to a second company site, reusing existing data infrastructure and templates with no site-specific rework
- Selected to present the reporting pipeline to Komline's executive team and 40-50 attendees at the company's national intern showcase (Washington, DC, August 2026)

Institute of Industrial & Systems Engineers (IISE) **Sept 2025 – Present**

Consultant *Berkeley, CA*

- Conducted structured research and data-driven operational analyses across 3 client engagements, identifying process inefficiencies and delivering strategic recommendations to cross-functional stakeholder teams
- Designed and deployed PuroScore, an AI-powered food safety tool for PuroPlate, Inc. that integrates Claude Vision API and Google Cloud Vision to automate ingredient label analysis, eliminating manual allergen classification workflows and scoring allergen risk across all 9 FDA major allergen groups
- Built a 200+ entry ingredient synonym dictionary with compound parsing to resolve derivative ingredients (e.g. "whey" → milk, "soy lecithin" → soy), and integrated real-time text extraction from product photos, enabling automated allergen analysis without manual data entry

PROJECTS

ClassHop

- Built ClassHop, a web app that turns any free hour in a student's schedule into a chance to sit in on a real UC Berkeley class, making it easy for students to explore subjects outside their major with zero planning
- Built a live data pipeline that pulls and validates real, up-to-date course and section data across UC Berkeley's full catalog (2,887 courses, 6,411 sections), so students always see accurate, currently-happening options instead of stale listings
- Added calendar and instructor-lookup integrations (Google Calendar, RateMyProfessor) so a student can act on a recommendation in one click instead of losing the idea

SKILLS & INTERESTS

- **Core Competencies**: Data Pipeline Development, Process Automation, ERP Systems, Data Validation & Reconciliation, Business Process Optimization, Stakeholder Reporting
- **Technical**: Python (Pandas, NumPy), SQL (Joins, Subqueries), Excel (Pivot Tables, Dashboards), AI-assisted development (Claude, Codex, Cursor)
- **Tools:** Claude Vision API, Microsoft Fabric, Dynamics 365, Google Cloud Vision
- **Interests:** Chess, Deep Learning, Fitness, Financial Markets, Wrestling, National Parks, Audiobooks
