Anish Krishnan

(408) 630-9679 | anishkrishnan@berkeley.edu | https://www.linkedin.com/in/anish–krishnan

Education

University of California, Berkeley May 2028
B.A in Computer Science, B.A in Data Science *Berkeley, CA*
Relevant Coursework: Aglorithms, Data Structures, Internet Architecture & Protocols, Discrete Mathematics & Probability Theory, Deep Learning for Visual Data, Principles and Techniques of Data Science, Data Ethics

Experience

Fellow Sep 2026 – Present
Hidden Information Labs Institute *Berkeley, CA*
- Building concurrent, Rust-based collaboration network that tracks real-time conflicts & branching opinions/decisions
- Researching & implementing algorithms (e.g., greedy) for detecting conflict events between investors or founders

Machine Learning Engineer Intern Jun. 2026 – Aug. 2026
Sephora *San Francisco, CA*
- Built session-level contextual search using embedding-based short-term memory to personalize product retrieval across user queries
- Developed vector aggregation & cosine-similarity ranking pipeline, improving LLM-judged product relevance by 34%
- Ensured low-latency retrieval with Redis caching & Databricks long-term storage to integrate personalized search into website

Software Engineer (Contract) Jan. 2026 – May 2026
iPick.ai *Berkeley, CA*
- Migrated 8K+ company records from JSON into PostgreSQL with relationship (e.g., competitors, subsidiaries).
- Built Flask-based REST APIs with Redis caching to serve graph queries, filters, & admin CRUD operations at scale.
- Integrated LLM extraction pipelines to automatically score and populate inter-company relationships from raw data.

Machine Learning Research Assistant Aug. 2025 – May 2026
Joint Genome Institute @ Lawrence Berkeley National Laboratory *Berkeley, CA*
- Engineered preprocessing workflows to clean 3K+ fungal genomes for deep learning input pipelines on HPC clusters.
- Fine-tuned CNN–biLSTM hybrid deep learning model (TensorFlow) to predict gene structures across fungal species.
- Evaluated results to tune hyperparameters for better predictions, improving structural accuracy by 23%.

Software Engineer Intern Jun. 2025 – Aug. 2025
Hidden Information Labs Institute *Remote*
- Developed high-performance game analyzing player behavior with 49-cell feature matrix to categorize profiles.
- Implemented frontend architecture and backend logic in Rust, JavaScript, WebGL API, and wasm-bindgen.
- Applied topological data analysis (persistent homology) to extract noise-resistant features for clustering models.

Projects

LaneRouter Jun. 2026 – Aug. 2026
Python, FastAPI, React, Docker, AWS *Remote*
- Developing a multi-step lane-planning algorithm in Python using graph search & uncertainty scoring to estimate which lane to be in throughout route
- Building FastAPI REST services and a React/TypeScript simulator integrating real-time lane metadata
- Containerizing full-stack services with Docker and automating pytest evaluation and deployment through AWS

Restaurant Meal Recommendation App Nov. 2025 – Mar. 2026
Python, FastAPI, PostgreSQL, Weaviate, Gemini API *Remote*
- Built RAG-based restaurant meal recommendation app with React/Flask architecture and PostgreSQL database.
- Preprocessed & semantically chunked data with SpaCy & Gemini API, store embeddings in Weaviate for retrieval.
- Retrieved embeddings using metrics such as cosine similarity & convert to text for context-aware query response.

Skills

Languages:Python, SQL (Postgre, SQLAlchemy), Java, Rust
Tools: Git, Docker, AWS, Databricks, MLFlow
