EDUCATION & COURSEWORK

University of California, Berkeley - Management, Entrepreneurship, & Technology Program
Dual Degree: B.S. Bioengineering & B.S. Business Administration
Relevant Coursework: Structures of Programming, Differential Equations and Linear Algebra, Technological Management, General Chemistry

EXPERIENCE

Danaher, Washington, District of Columbia **Expected May 2026 - August 2026**
Incoming Product Management Intern
- Will conduct analysis of pricing strategy of HPLC product portfolio in international markets via financial analytics and market research
- Refreshing 3-5 year product lifecycle roadmap, identifying candidates for obsolescence based on business performance and R&D trends

UC San Francisco, San Francisco, California **Oct. 2025 - Present**
R&D Engineer
- Engineering arteriovenous mock circulatory loop for in-vitro testing of peripheral intravascular artificial organs (kidney and oxygenator)
- Working on silicon nanopore membrane chip design, testing, and quality control | Conduct hydraulic permeability testing and analysis
- Managing lab operations, storage, and inventory control | Categorizing lab equipment for multi-lab usage and ordering needed tools

Blue Origin, Seattle, Washington **Aug. 2025 - Dec. 2025**
Technical Product Consultant
- Drafting 5-year plan for the construction, deployment, and operation of data centers in outer space to reach $1B+ free cash flow by 2030
- Evaluating alternative energy in outerspace (e.g. lunar regolith, solar, nuclear) to power data centers via in-situ resource utilization (IRSU)

UC Berkeley College of Engineering - Nanotechnology Lab, Berkeley, California **Aug. 2025 - Dec. 2025**
Research Assistant (Biosensing)
- Growing carbon nanotubes on metal-silicon chips and applying aluminum and titanium coatings for multi-analyte biomolecule sensing
- Developing machine learning models to analyze neural signals obtained from biosensors for BCIs (compatible with robotic exoskeletons)

Massachusetts Institute of Technology, Boston, Massachusetts **July 2022 - Aug. 2025**
Project Manager and Patent Owner
- Engineered biomedical device for pet safety via temperature sensing (IR), GPS, microcontroller body, carbon casing, and companion app
- Oversaw product development, prototyping from early-stage low affinity device to commercial product, and IP filing (US: 20240423167)
- Presented finalized invention to MIT's dean of engineering, professors, and research scientists at the 2023 MIT EurekaFest in Boston, MA

NASA & California Space Grant Consortium, San Diego, California **May 2024 - Jan. 2025**
Machine Learning and Robotics Intern
- Developed unsupervised classification models and neural networks running real-time regression and inference on live infrasound data acquired via Raspberry Pi 4 and custom built infrasound monitors for seismic event forecasting (earthquakes, volcanic eruptions, etc.)
- Worked with team to research usage of infrasound monitors as a method of regulating infrasound-based chemotherapy pre-treatments

City of Hope Medical Center, Los Angeles, California **May 2024 - Sept. 2024**
Biomedical Research Intern
- Engineered novel CD20 cys-minibody (cMb) protein targeting the CD20 antigen on cancerous B-cells and analyzed cell binding efficiency
- Determined potential for novel CD20 targeted breast cancer diagnosis and patient selection methods under PET/CT imaging techniques
- Performed cell culturing, western blot, protein purification (TFF and AKTA), SEC, SDS-Page, protein conjugation, & flow cytometry assays
- Presented at City of Hope's 2024 Eugene and Ruth Roberts Research Conference and received a $4500 summer stipend research award

NASA Ames Research Center, Mountain View, California **July 2023 - Aug. 2024**
Computational Biology Research Intern
- Analyzed the genomic metadata of space-flown drosophila heart tissue via differential gene expression and fast gene set enrichment in R
- Investigated risks of microgravity-induced hypertrophic cardiomyopathies in astronauts during long-duration space missions via MATLAB
- Presented research at the 2023 NASA GeneLab Conference, invited to ASGSR, and returned as a mentor intern from June to August 2024

AWARDS & ACHIEVEMENTS

- Winner of M.E.T. Founders, Morton Foundation, Optimist International, and First Tee Scholarships: $35,000 worth of total scholarships
- 1st place out of 1000+ at the Business Professionals of America National Competition: Virtual Branding and Business Marketing Event
- Top 10 at the Business Professionals of America National Competition: Pitched heart arrhythmia detection device in the Start-Up Event
- United States National Award of Congressional and Senate Recognition: For special achievement in academia, innovation, and science
- High School Valedictorian (1/396) and International Baccalaureate Scholar – 4.75 GPA, IB Diploma Honor, and AP Scholar with Distinction

ADDITIONAL INFORMATION

- Programming Languages: Python, Java, Swift, SQL, VBA (Excel)| Languages: English, Tamil, and Spanish (California State Seal of Biliteracy)
- Skills: Artificial Intelligence, Machine Learning, Biomedical Device Development, Robotics, Financial Analysis, Decking, Scientific Writing
- Software: Solidworks, AutoCAD, MATLAB, MiniTab, LabVIEW, ImageJ, Microsoft Office Suite (Excel, Powerpoint, Word), PowerBI, Tableau
