Nish Gupta

EDUCATION

University of California, Berkeley **May 2029**
B.A. Neuroscience & Data Science
Relevant Courses: Neurotech, Intro to Biotech, Data Science 8, Brain, Mind, and Behavior, Intro to Econ, Chemistry
Awards: UC Berkeley Fung Fellowship, 1st Place UC Launch Accelerator, 1st Place Haas Entrepreneurship's Calvanize Accelerator

Woodinville High School **Sep 2021 - Jun 2025**
Awards: Top 10 International Entrepreneurship Role Play, 1st Place National FBLA Entrepreneurship, #LookForward Research Grant, Oxford Leadership Award, National DECA Business Management Qualifier

PROFESSIONAL EXPERIENCE

BioLay (StEP Incubator F26 Batch) Berkeley, CA
Co-Founder, CEO *Jun 2026 - Present*
- Co-founded and shipped BioLay, building rehab-native agentic workflows that automate insurance, intake, clinical documentation, and administrative handoffs for independent PT and chiropractic clinics, taking it from initial prototype through live deployment.
- Led 35 customer-discovery interviews across independent clinics and Stanford University Hospital, identifying clinic ownership as the key buying signal and insurance/admin workflows as the primary pain point; translated findings into an MVP for rehab practices.

Unique Minds, AI Companion Startup Seattle, WA
Product Strategy & UX Intern *Oct 2025 - Mar 2026*
- Collaborated closely with engineering and design to specify and refine child-facing features (guided check-ins, conversational scaffolding, and reinforcement loops) for neurodivergent children, aligning UX decisions with developmental constraints.
- Shaped feature framing, landing-page messaging, and use-case narratives to accelerate early go-to-market strategy and product-market-fit validation, contributing to 3 pilot deployments and demos with 12 clinical and partner stakeholders.
- Worked with clinical psychologists to define and validate feature requirements and behavioral guardrails throughout development, ensuring AI responses and support pathways adhered to Applied Behavior Analysis safety constraints for neurodivergent users.

Paula's Choice (Contract) Berkeley, CA
Strategy Consultant *Sep 2025 - Jan 2026*
- Led end-to-end portfolio expansion strategy, including market sizing, competitor benchmarking against 10+ competitors, and consumer research with 100+ survey responses across adjacent product categories to identify high-opportunity entry points.
- Synthesized findings into a go-to-market recommendation and prioritization framework, delivered to the head of marketing to shape the company's newest in-store product releases, from category selection and product concept to positioning and shelf presentation.

#LookForward Program, SeekHer Foundation San Diego, CA
Youth Board Founder & Senior Advisor *Jan 2024 - July 2026*
- Selected as 1 of 6 national grantees for an eating disorder initiative, developed with clinical psychologists; launched and led national youth board for advocacy mentorship, and developed an adaptive "train-the-trainer" curriculum to support scalable implementation.
- Promoted youth board program across WA high schools, expanding reach to 300+ applicants within 6 months, and trained 15 students to design and execute passion-driven social impact campaigns that reached thousands across marginalized communities.
- Achieved 50% annual increase in applicants, training new students each year to build the largest national female advocacy network.

RESEARCH EXPERIENCE

Institute of All Minds Berkeley, CA
Research Engineer & Associate *May 2026 - Present*
- Building an ML/computer vision pipeline to automate mouse brain lesion quantification, specifically LGN damage, cutting per-brain analysis from 1–3 hours of manual tracing to under two minutes across multiple collaborating labs each processing 25+ brains/week.
- Researching neurodegeneration to test whether it directly drives untreatable diseases, including Alzheimer's, Parkinson's, and ALS.
- Running transcardial perfusions, brain sectioning, histology, immunohistochemistry, and fluorescence microscopy to assess neural tissue and viral expression across models; observing mouse stereotactic surgery, stereotaxic viral injections, and targeted neural silencing

Stice Lab, Stanford University School of Medicine Palo Alto, CA
Research Intern *Jan 2026 - Aug 2026*
- Researched dysregulated reward processing and developed evidence-based interventions targeting maladaptive reward-driven behavior.
- Drafted and finalized IRB protocols and supporting documentation to secure ethical approval for human-subjects intervention research; wrote grant applications to fund the lab's intervention research, articulating study aims, methods, and expected impact.

Music Cognition Lab, Georgia State University Atlanta, GA
Research Assistant *Feb 2024 - Dec 2024*
- Analyzed 200+ recording samples to study how the brain creates music from 3-note patterns in Jazz and Hindustani improvisation; developed algorithms that leveraged neural networks to model recurring note-selection patterns and replicate human improvisation.

SKILLS & INTERESTS

Skills: Computer Vision, Python, Neural Networks, Data Analysis, Immunohistochemistry, Histology
Interests: Writing/Producing Indie-Alt Music, The Subconscious, Neurodegeneration, Hiking, Dance, How I Met Your Mother
