Tristin Yun
Berkeley, CA | tristin@berkeley.edu | tristin.org

Education

University of California, Berkeley — Expected May 2030
Intended B.A. in Analytics and Economics — *Berkeley, CA*

Experience

Eleos Marketing Group — 2023 – 2026
Founder & President — *Remote*

- Founded and scaled a 15-member pro bono growth consultancy serving 10+ nonprofits and small businesses across web development, search engine optimization, and email marketing.
- Cut page-load time by 50%, increased organic traffic by 62%, and nearly doubled email sign-ups for one client; raised newsletter open rate from 22% to 46% and restored volunteer inquiries for another.
- Led client discovery, project scoping, delegation, and delivery; secured a $2,000 Microsoft Azure grant to support hosting and deployment.

Memorial Sloan Kettering Cancer Center — Summer 2025 – 2026
Computational Oncology Intern, HOPP Summer Student Program — *New York, NY*

- Selected as 1 of 8 students from approximately 800 applicants to participate in MSK's Summer Student Program.
- Analyzed clinical and genomic data to compare primary and radiation-associated bladder cancer using survival analysis, Fisher's exact tests, and Benjamini–Hochberg false discovery rate correction.
- Quantified lower FGFR3 mutation frequency (5% vs. 26%) and five-year survival (20% vs. 60%) in radiation-associated disease, identifying clinically meaningful differences in tumor biology and prognosis.
- Built elastic-net Cox models combining 16 clinical and 30 genomic features, improving risk discrimination over clinical-only models across two to seven-year horizons; produced a poster and manuscript.

Columbia University Irving Medical Center — Summer 2024
Neuroepidemiology Research Intern — *New York, NY*

- Applied survey-weighted mediation models to nationally representative NHANES data for adults age 60+; found biological aging explained approximately 48% of the hypertension–cognition association and 53% within a delayed-aging subgroup.
- Published a first-author peer-reviewed abstract in *Alzheimer's & Dementia*; selected as a Top 10 Finalist for the American Academy of Neurology Neuroscience Research Prize.
- Presented findings at AD/PD 2025 and the New Jersey Academy of Science; research was also presented at AAIC 2025.

Wharton Global Youth Investment Competition — 2024
Lead Analyst & Strategist — *Remote*

- Built risk-adjusted net present value models for six biotech companies and an R-based Monte Carlo framework evaluating 1,545,500 portfolio allocations across approximately 772 million simulated drug-development outcomes over 10–12-year horizons.
- Translated simulation results into a risk-optimized biotech allocation with a 95.3% simulated probability of positive return, cutting loss risk from 10.0% under equal weighting to 4.7% and reducing volatility by 48%.

Projects & Leadership

Telurion Inc. — Summer 2025
Founder — *Remote*

- Founded an AI startup exploring test-time compute scaling, developing inference pipelines that allow existing language models to spend additional compute on difficult reasoning problems rather than relying on a single-pass response.
- Designed experiments evaluating whether longer reasoning improves performance on advanced quantitative and logical problems; built a full-stack React and TypeScript prototype to make the inference workflow accessible through a user-facing web application.
- Secured $5,000 in seed funding to support model experimentation and prototype development.

Pulse&Pitch — Summer 2025
Creator & Developer — *Remote*

- Built an R Shiny platform integrating wearable heart-rate data with musical audio to quantify physiological responses during live performance; identified performer–audience heart-rate synchrony as high as $r = 0.91$ in Carnegie Hall concert data.
- Engineered an audio-analysis pipeline extracting loudness (RMS), fundamental frequency, and spectral centroid in one-second windows, synchronized with instantaneous heart rate and rolling RMSSD to measure relationships between musical features and autonomic response.
- Implemented artifact-corrected HRV analysis, dynamic stress/recovery classification, adjustable-lag cross-correlation, and interactive Plotly visualizations with synchronized audio playback and click-to-seek functionality.

The Yuniverse — 2025 – Present
Founder & Developer — *Remote*

- Designed and developed tristin.org using React, TypeScript, Tailwind CSS, Vite, and shadcn/ui, a personal portfolio website featuring selected research, projects, and several blog posts on topics across statistics, economics, neuroscience, and music.

Selected Music Leadership — 2020 – Present
Classical Violinist — *New York, NY*

- Served as Principal Violinist at Manhattan School of Music Precollege and First Violinist in the Grammy-winning New York Youth Symphony; led 20+ musicians and performed three annual concerts at Carnegie Hall.
- Directed section preparation and coordinated bowings and interpretation; led an ensemble to win the Chamber Music Society of Lincoln Center Young Musicians Competition among 200+ groups and perform at Alice Tully Hall.
