Education

University of California, Berkeley, *Berkeley, CA* Expected Dec 2026

BS in Electrical Engineering & Computer Science
Relevant Coursework: Discrete Mathematics & Probability Theory (CS 70), Artificial Intelligence (CS 188), Computer Graphics (CS 184), Computer Networks (CS 168), AI Agents (CS 194), Game Theory (GamesCrafters, CS 198)

Experience

TikTok, Software Engineer Intern, *San Jose, CA* May 2026 – Present

- Built an AI workflow automation platform that automates large-screen UI adaptations and bug fixes for the User Growth team, orchestrated with the open-source Hermes agent framework (Nous Research)
- Achieved a 90% fix-acceptance rate, cutting bug-fix turnaround from ∼2 weeks to 2 days

Stealth Startup, Co-founder, *Berkeley, CA* Dec 2025 – Present

- Building an AI-powered risk-management OS for the AI era; architected and shipped the platform end-to-end (AWS, Next.js, NestJS, Prisma, PostgreSQL); 2 paying pilot customers
- Admitted to Berkeley SkyDeck Pad-13 incubator (∼2% acceptance); lead all engineering, managing 2 SWE interns

MobileCybench, Undergraduate Researcher, *UC Berkeley* Aug 2025 – Mar 2026

- Developed AI agents that detect vulnerabilities in Android applications, advised by Andy Zhang, creator of the Cybench benchmark
- Built the evaluation harness and benchmarked agent runs across 20 Android applications

Amlogic, Software Engineering Intern, *Mountain View, CA* May 2025 – Aug 2025

- Developed an AI voice agent for smart TVs using Model Context Protocol (MCP), enabling natural-language content recommendations and device automations

Pioneer Research Program, Researcher, *Remote* Jan 2023 – Oct 2023

- Authored "Predicting the Occurrence and Duration of Migraine Attacks Using Machine Learning" with Prof. Zbigniew Kabala (Duke), using Wolfram Mathematica's built-in ML classifiers

Projects

GRAFIQ: Verifiable VQA Benchmark for VLMs, *Berkeley CS 184* Feb 2026 – Apr 2026

- Co-built GRAFIQ, a 480-item pixel-verified VQA benchmark isolating depth, roughness, surface orientation, and lighting via deterministic Blender renders, with every label verified against the underlying render passes
- Evaluated 7 VLMs (Gemini 3.1 Pro, Claude Opus 4.5, GPT-5-mini, +4 more); top model reached 74.8% overall and near-chance on surface orientation and lighting; code and dataset open-sourced

AI Safety Layer for Meta Support Chatbot, *client project via Dana Street Consulting* Dec 2025 – May 2026

- Led a 6-person project team delivering a jailbreak/hate-speech safety layer, plus context-memory and tool-verification agents, for Meta's support chatbot
- Two-layer detector (regex filters + embedding similarity over ∼5,000 known jailbreak prompts, threshold tuned via precision–recall curves) reached 96% recall / 99% precision on a 458-prompt eval set

Leadership & Activities

- **UX at Berkeley** — EVP & UX Engineer Director (Sep 2024 – Apr 2026): led full-stack builds for a Taiwanese bento restaurant and a Korean ed-tech startup; grew the restaurant's online orders by 250%
- **Dana Street Consulting** — Founding Officer & EVP (Dec 2025 – May 2026): co-founded a student consulting group; sourced and scoped client engagements incl. Meta (see Projects)
- **CommuniCare Oregon** — Liaison & Co-teacher (2020 – 2024): helped raise and grant $61,660 to 11 Portland-area nonprofits serving homelessness, domestic violence, and veterans' mental health; 2023 Student Spotlight

Skills

Languages: Python, TypeScript, Swift, Java, C++
AI Tooling: Claude Code, Codex, Cursor, agent & eval harness engineering, workflow engineering, MCP
Frameworks: Next.js, NestJS, React, Node.js, Prisma, PostgreSQL, AWS, Tailwind
Tools & Interests: Git, Figma, Unity; cooking, cold plunging, journaling, volunteering
