SALMAN ALMAHARI

Cybersecurity Analyst

Professional Summary

Cybersecurity graduate with banking-sector experience designing and shipping a production compliance-automation pipeline now in operational use at a CBB-licensed bank. Combines security engineering, dimensional data modeling, and full-stack development to deliver reliable, audit-ready systems in regulated environments. Award-winning final-year project; completing an intensive full-stack and cybersecurity specialization at Reboot Coding Institute. Driven by a deep curiosity for how systems work beneath the surface, with a commitment to building genuine technical foundations rather than surface-level familiarity.

TECHNICAL SKILLS

Security: Threat modeling (STRIDE), SOC architecture, incident response, log correlation, SIEM (Wazuh, ELK), IAM, Nipper, Packet Tracer, compliance (PCI DSS 4.0, NIST SP 800-53/171, CIS, CMMC, PDPL, CBB)
Languages: Python, Go, JavaScript, TypeScript, SQL
Data / BI: ETL, pandas, star schema / dimensional modeling, Power BI, SQLite
Web: React, Next.js, WebSockets, GraphQL, HTML/CSS, Tailwind
Tooling: Docker, Docker Compose, Git
Languages: Arabic, English

EXPERIENCE

Cybersecurity Intern, Information Security (Risk Department) | Al Salam Bank *Feb 2026 – Jun 2026*
AWARD WINNER

Tech: *Python, pandas, SQLite, star schema, Power BI, SHA-256, Microsoft Teams API, Nipper, Git*

- Designed and shipped a production Python ETL pipeline automating quarterly network-compliance reporting cutting days of manual processing to a single command in under three minutes; signed off by Risk leadership and now in operational use.
- Processed Titania Nipper audit exports (1,200+ CSV files per scan) across five compliance frameworks (CIS, NIST SP 800-53, NIST SP 800-171, PCI DSS 4.0, CMMC) into a Power BI-ready star schema for the Risk Department dashboard.
- Implemented banking-grade reliability SHA-256 hash-chained archival, atomic writes, PID-based locking, and a tamper-evident audit trail aligned with PCI DSS Requirement 10 validated by 65 unit tests and 7 end-to-end regression scenarios.

PROJECTS

Aegis - SME SOC Architecture | Cyber Guards Hackathon, Sheikh Nasser Centre *2025*

Tech: *Wazuh, ELK, TheHive, Cortex, Cloudflare, pfSense, STRIDE*

- Researched and designed a cost-effective SOC architecture for SMEs, aligned with the STRIDE threat model and defense-in-depth principles, evaluating SIEM, logging, IAM, network, and incident-response tooling (Wazuh, ELK, TheHive, Cortex, Cloudflare, pfSense).
- Designed log-correlation, threat-detection, and incident-response workflows with PDPL and CBB compliance considerations, and proposed an Arabic-language social-engineering detection approach tailored to Bahrain's threat landscape.

SocialHub - Full-Stack Social Networking Platform | Bahrain Polytechnic *2025*

Tech: *Go, GorillaWebSocket, SQLite, golang-migrate, bcrypt, Next.js 15, TypeScript, Tailwind, Radix UI*

- Built a Go REST API with bcrypt hashing and HTTP-only session-cookie auth, a multiplexed Gorilla Web Socket hub for real-time messaging, notifications, and follow updates, and a three- tier server-side post privacy model (Public, follower-only, and private user-list).

- Developed a Next.js 15 +TypeScript frontend(AppRouter,Tailwind,Radix UI) with React Context state; designed the SQLite schema for users, posts, groups, events, messages, and notifications, applied via version-ordered migrations (go lang-migrate).

EDUCATION

Bachelor of Cybersecurity | Bahrain Polytechnic *2022 – 2026*

Solid grounding in information security, threat modeling, network security, and security best practices. Strengthened analytical thinking, technical documentation, and collaboration through applied coursework and a banking-sector internship. Studied on a scholarship.

Full-Stack Developer Diploma | Reboot Coding Institute *2023 – 2026*

Intensive, project-based full-stack software development and cybersecurity training, specializing in cybersecurity while excelling both individually and in teams across diverse real-world projects.

KEY ACHIEVEMENTS

- Delivered a compliance-automation system now in production use at a licensed Bahraini bank, reducing recurring days of manual work to minutes.
- Won a Best Project award for the CLP / Al Salam Bank system, demonstrated at Bahrain Polytechnic.
- Built production - grade reliability features (hash-chain integrity, atomic writes, distributed locking) rarely attempted at undergraduate level.
