Walaa Mohamed Aljarhi

Full-Stack Developer

Education

09/2023 – 05/2026
Bahrain

Bachelor of Information and Communication Technology, Cybersecurity, *Bahrain Polytechnic*
Studied core areas of cybersecurity, networking, databases, and system design. Gained hands-on experience with tools and technologies such asL inux, Wireshark, Wazuh, Kali Linux and Metasploit tools through practical projects and labs.

10/2024 – 06/2026
Bahrain

Full Stack Development, *Reboot Coding Institution*
Studied full stack development with a focus on cybersecurity and AI. Gained hands-on experience building projects using technologies such as Golang, JavaScript, TypeScript, Rust and databases, while strengthening skills in backend development, frontend development, APIs, and secure software design. Also learned how to apply AI concepts in practical projects, including machine learning, automation, and intelligent system development.

Professional Experience

01/2026 – Present
Bahrain

Flooss, *Software Developer Intern*
Worked on backend development by implementing features, fixing bugs, and supporting database-related tasks within Flooss systems. Also developed Flooss Guard, an AI-powered security tool designed to automate authorized penetration testing, identify vulnerabilities, display scan activity through a dashboard, and generate security reports.

Projects

Movie Recommendation System,
A recommendation engine that suggests movies to users based on rating patterns and similarity techniques.
Technologies: Python, SVD, Matrix Factorization, MovieLens 1M
What I did:
- Built a recommendation model using collaborative filtering
- Applied SVD and matrix factorization techniques
- Processed user-rating data from the MovieLens 1M dataset
- Generated personalized movie recommendations

Credit Risk Scoring Model,
A machine learning model designed to predict loan default risk using financial and customer-related data.
Technologies: Python, LightGBM, SHAP, Pandas, Scikit-learn
What I did:
- Developed a loan default prediction model using the Home Credit dataset
- Performed data preprocessing and feature engineering
- Used SHAP explainability to interpret model predictions
- Evaluated model performance using machine learning metrics

Machine Learning Trading Strategy, *A machine learning-based trading strategy project that analyzes S&P 500 market data using technical indicators and backtesting.*
Technologies: Python, Pandas, Scikit-learn, Technical Indicators, Backtesting
What I did:
- Built ML-driven trading strategies using S&P 500 data
- Created technical indicator-based features
- Applied time-series validation to avoid data leakage
- Tested strategy performance using backtesting techniques

Skills

- Wireshark proficiency
- Wazuh experience
- Intelligent system development
- Automation skills
- AI concepts in development
- Collaborative filtering
- Backtesting techniques
- Machine learning applications
- Attention to Detail

Certificates

Bahrain Women's Leadership Program — **Embassy Of USA** | Throughout July 26, 2021, to August 4, 2021
