Education

University of California, Berkeley Berkeley, CA

B.S. in Electrical Engineering and Computer Sciences *August 2024 - May 2028*

- Coursework: Data Structures & Algorithms, Optimization Models, Discrete Math & Probability, Computer Architecture
- Activities: AI Entrepreneurs at Berkeley, Berkeley Entrepreneurship Hub, Berkeley Skydeck ACE Program, Ascend Consulting – Tech Chair, IEEE, YC Startup School 2026, 2x SIG Discovery Day, Point72 Academy Spring Sessions

Ventures & Projects

Mimicry – Cofounder | *Product Strategy, Market Research, Go-to-Market*

- Cofounded a startup collecting and annotating egocentric data at scale, targeting the data-collection bottleneck that constrains robotics labs.
- Defined the go-to-market strategy and identified initial pilot markets through cost and competitive analysis; built the founding pitch narrative.

Tandem | Demo | GitHub | *TypeScript, React, Node.js, Anthropic SDK*

- Built a real-time collaborative environment for AI coding sessions, addressing why AI development tools remain single-player while software is built by teams.
- Advanced to the final partner interview for a16z Speedrun, defending the technical approach and market thesis under direct questioning; prototype built at the Stanford x Google DeepMind Hackathon.

ShopSync | GitHub | *Next.js, Supabase, OpenAI API*

- Built a full-stack recommendation platform using LLMs and semantic retrieval over normalized merchant inventory data.
- Selected as a Falling Walls Lab San Francisco finalist among participants from 60+ countries, pitching the venture to a panel of judges.

Experience

Goldman Sachs 2026

Emerging Leaders Series – Software Engineering Track

- Selected from a global applicant pool through competitive review; built quantitative analytics infrastructure for a mutual fund forecasting platform.
- Implemented CAPM alpha modeling, Monte Carlo simulations, Sharpe-based risk-adjusted return analysis, and backtesting pipelines on live market data; presented at Goldman Engineering HQ.

Capital One May 2026 – August 2026

Software Engineering Intern

- Scoped and shipped an AI reconciliation tool that cut a 4-week manual process to under 2 days for a $10B-spend ledger migration, driving adoption to 20+ daily users.
- Ran user research with Finance analysts to identify why the existing workflow failed, then iterated on the product as requirements shifted mid-build.

UC Berkeley Sky Computing Lab June 2026 – Present

Machine Learning Systems Researcher

- Extending Dev Bali's FairInference project (SOSP 2026 submission), implementing scheduling logic in a forked SGLang LLM inference engine.

Stanford Graduate School of Business January 2026 – May 2026

Software Engineer – AI Security (via Ascend Consulting)

- Led architecture planning for a multi-agent AI system and built the validation pipeline that confirmed 5 findings from approximately 10 candidates.

Olfera | Runopt 2025

Software Engineering Intern (early-stage startups)

- Built backend infrastructure on AWS at Olfera and a 3D simulation framework at Runopt, working directly with founders to scope technical requirements against product timelines.

Skills

Venture & Product: Market research, competitive analysis, go-to-market strategy, financial modeling (Monte Carlo, CAPM, backtesting), pitching, user research, product requirements

Technical: Python, SQL, JavaScript/TypeScript, React, Next.js, LLM systems (LangGraph, RAG), data analysis (Pandas, PyArrow), AWS, Docker, Git
