EDUCATION

University of California, Berkeley — Expected Graduation, May 2027
B.S. Data Science and Economics — College of Computing, Data Science, and Society
Relevant Coursework: Foundations of Data Science (Data C8), Computational Structures in Data Science(Data C88C), Computer Science A / Principles, Digital Humanities 101 with Python, Introduction to machine learning in Economics, Introduction to SQl and Python, Introduction to API production, Introduction to Accounting

WORK EXPERIENCE

Farmers Insurance — Los Angeles, CA
Data Marketing Intern — June 2023 – August 2023

- Conducted market and macroeconomic analysis to assess external risk factors and regulatory considerations, supporting strategic pricing and compliance decisions for high-value insurance policies.
- Built Excel-based financial models to quantify cost-saving measures and evaluate the economic impact of underwriting guideline revisions.
- Optimized internal data management processes, reducing time spent on data retrieval by 25% and enabling faster business insights for the marketing and underwriting teams.

American Diabetes Association — Boston, MA
Intern/researcher — August 2022 – November 2023

- Built a machine learning model to analyze blood sugar fluctuations in diabetes camp participants, applying data cleaning, feature selection, and predictive modeling to uncover dietary risk patterns
- Produced eight additional datasets by systematically reviewing and restructuring information to improve data accessibility, collaborating with the lead researcher to enhance analytical efficiency.
- Completed deliverables ahead of schedule to incorporate supervisor feedback, refining outputs for higher accuracy and earning recognition from the head of research for exceptional initiative and impact.

Athena AI — Berkeley, CA
Data Analyst / Business Operations — August 2024 – May 2025

- Analyzed user behavior trends to identify operational inefficiencies, translating insights into strategic recommendations that improved client engagement by 25%.
- Developed a neural network classification model to segment and categorize user feedback, enabling data-driven prioritization of product enhancements and improving customer sentiment by 30%.
- Performed advanced statistical analyses on engagement metrics to extract actionable insights, directly informing business strategy decisions that drove a 25% increase in user retention and interaction.

Daxe AI — Berkeley, CA
Software Engineer — May 2025 – Current

- Designed and deployed GraphRAG-powered document retrieval pipelines using LangChain and Haystack, improving legal data accessibility and enabling faster, more informed business decisions.
- Delivered production-grade features that enhanced semantic search and agentic AI workflows, driving operational efficiency and creating scalable enterprise-ready solutions for legal intelligence.
- Developed AI-powered document retrieval pipelines to improve legal data accessibility, enhancing operational decision-making for enterprise clients in highly regulated industries.

Berkeley Undergraduate Research Apprenticeship Program (URAP) — Berkeley CA
Research Assistant/Intern — August 2024 – Current

- Collaborated with Professor Stefano M. Bertozzi to build interactive databases and real-time dashboards, streamlining editorial workflows and improving operational decision-making efficiency.
- Performed data-driven research to optimize workflows for academic publications, enhancing stakeholder collaboration and improving the efficiency of peer-review and policy evaluation processes.
- Participated in weekly editorial strategy meetings with international teams, contributing actionable insights to guide the evaluation and prioritization of high-impact infectious disease research.

Skills: Python, Java, SQL, Excel, Machine Learning, Web-dev, OOP, Web/Backend Development, Git, UX/UI
