Ryan Du

626-461-8119 | ryandu@berkeley.edu

Education

University of California, Berkeley — Berkeley, CA
Bachelor of Science in Electrical Engineering and Computer Sciences — *Aug. 2025 – May 2029*

- Regents and Chancellors Scholar

Experience

iOS Engineer — September 2025 - Current
xAI — *Palo Alto, CA*

- Built high performance user experiences for the Grok mobile app
- Integrated with production-level APIs and backend services to deliver real-time AI interactions

iOS & macOS Engineer — January 2025 – September 2025
MinutesAI — *Atlanta, GA*

- Led end-to-end development of MinutesAI Desktop app from initial design to production deployment
- Engineered custom Rust modules to interface with low-level macOS audio APIs for system-wide audio capture
- Delivered production-ready application handling real-time audio processing and transcription workflows

Co-founder & Lead Developer — June 2023 – August 2024
Yuno - AI Research Assistant — *Atlanta, GA*

- Co-founded and developed Yuno, an AI-powered platform serving 700+ waitlisted academic researchers
- Secured $1,000 grant from 1517 Fund and pitched to investors at iGEM Grand Jamboree international conference
- Built full-stack web application to streamline research workflows and enhance productivity (yuno.so)

Independent iOS Developer — June 2020 – May 2022
JustRipe - Food Management App — *Atlanta, GA*

- Designed and launched JustRipe, achieving 2,000+ downloads on Apple App Store (demo)
- Build receipt scanning OCR features for automatically adding food inventory with Vision OCR and CoreML.

Projects

Exploring ML - Neural Network Visualizer | *Swift, Core ML, Accelerate, SpriteKit, DL4S* — June 2021

- Selected as Apple WWDC Swift Student Challenge Winner 2021
- Built on-device neural network training system for handwritten digit classification (https://github.com/ryendu/exploring-ml)
- Developed interactive playground app demonstrating neural network architecture and training process
- Contributed to DL4S, at the time one of the only native neural network implementations in Swift

Sound2Ahap - Audio to Haptic Converter | *Python, Swift, CoreHaptics, NumPy* — June 2021

- Engineered Python algorithm to convert .wav audio files into Apple-compatible haptic feedback patterns (https://github.com/ryendu/sound2ahap)
- Developed iOS application to synchronize haptic feedback with music playback for immersive experiences

FindMe - Location-Based Social Game | *Swift, SwiftUI, MapKit, CloudKit* — June 2022

- Won 1st Place at Apple WWDC Community Hackathon
- Developed real-time multiplayer game for global hide-and-seek with friends using Apple's SharePlay APIs in 24 hours

Technical Skills

Languages: Swift, Rust, Python, JavaScript/TypeScript, Java, HTML/CSS, SQL
Frameworks: SwiftUI, UIKit, Next.js, React, Tauri, TailwindCSS, Core ML, CoreData, PyTorch, TensorFlow, scikit-learn, SceneKit, SpriteKit, CoreHaptics, AVFoundation, ARKit, RealityKit
Developer Tools: Xcode, Git, Docker, VS Code, TestFlight, App Store Connect
Platforms: iOS, macOS, Web, Cross-platform Desktop Applications
